

Week 1: HTML & CSS Foundation

3-Month MERN Stack Internship Program

The goal of this week is to build a strong, responsive, and semantically correct frontend foundation before moving on to JavaScript and React in the upcoming weeks.

Day 1: Semantic HTML5

- **Study:** Understand the DOM tree and HTML5 semantic tags (<header>, <nav>, <main>, <section>, <article>, <footer>).
- **Task:** Create a structured, text-only resume or profile page using strictly semantic HTML5. Include ordered/unordered lists, a table for education/skills, and an interactive contact <form> with proper input types and validations.

Day 2: CSS Basics & The Box Model

- **Study:** CSS selectors, specificity, colors, typography, and the CSS Box Model (margin, border, padding, content).
- **Task:** Link an external stylesheet to your Day 1 HTML file. Style the resume to look clean and professional. Implement custom web fonts (e.g., Google Fonts) and use pseudo-classes (:hover, :focus) on form inputs and links.

Day 3: Modern Layouts (Flexbox & Grid)

- **Study:** 1-dimensional layouts with CSS Flexbox and 2-dimensional layouts with CSS Grid.
- **Task:** Create a classic "Holy Grail" webpage layout (Header, Left Sidebar, Main Content, Right Sidebar, Footer) using **CSS Grid**. Inside the Main Content area, use **Flexbox** to align a gallery of placeholder images or product cards.

Day 4: Responsive Web Design (RWD)

- **Study:** Viewport meta tag, relative units (rem, em, vh, vw, %), and Media Queries.
- **Task:** Take the layout built on Day 3 and make it fully responsive. Ensure it uses a mobile-first approach (stacking columns on mobile devices and expanding to a multi-column layout on tablets and desktops).

Day 5: End-of-Week Mini-Project

- **Task:** Build a **Responsive Personal Portfolio Landing Page** from scratch.
- **Requirements:**
 - A sticky navigation bar.
 - A hero section with a background image or CSS gradient.
 - An "About Me" section (using Grid or Flexbox).
 - A "Projects" section with at least 3 styled cards.
 - A functional-looking contact form.
 - Must look good on both mobile and desktop screens.

End of Week Deliverables

- **Source Code:** Push all daily tasks and the final mini-project to a dedicated GitHub repository.
- **Live Link:** Deploy the Day 5 Portfolio using GitHub Pages, Netlify, or Vercel.
- **Code Review:** Ensure the code is properly indented, comments are added where necessary, and CSS classes follow a consistent naming convention (like BEM).
